Combine phase A ingredients and mix well at 1000 rpm with a dispersing blade (Note: Hydrating Sepimax Zen into glycerin is very slow process - using vacuum and homogenizer will speed up the swelling of sepimax zen in glycerin). Heat phase B to 60 °C and mix well to obtain a clear oil.

Combine phase A and phase B together with a dispersing blade at 1,500 rpm to obtain a uniform gel. Slow down mixing speed to 100 rpm and use an anchor propeller and add phase C.

This exfoliating sugar lip scrub glides on the lips and helps remove dead or flaky skin
